                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SP (S.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CDS are numbered using the following system eg SPAC5H10.01c. SP (S CDS) are numbered using the following system eg SPAC5H10.01c. SP (S COMPLementary strand).

The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous.

The length in codons is given for each CDS.

IMPORTANT: This sequence MAX NOT be the entire insert of the sequenced clone. It may be shorter because we only sequence overlapping sections once, or longer, because we arrange for a small overlap between neighbouring submissions.

COSMIG C12H3 and at the 5' end by cosmid c1F3 and at the 3' end by cosmid c12F3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                this region is derived from cosmid c1D4 is at position 134, while the position 4137 in this sequence"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Details of yeast sequencing at the Sanger Centre are available on
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      number of introns/exons or we may not have chosen the correct splice donor/acceptor sites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2137. .2316))

* NOTE: This record contains 1 individual

* sequencing reads that have not been assembled into

* contigs. Runs of N are used to separate the reads

* and the order in which they appear is completely

* arbitrary. Low-pass sequence sampling is useful for

* identifying clones that may be gene-rich and allows

* overlap relationships among clones to be deduced.

* However, it should not be assumed that this clone

* will be sequenced to completion. In the event that

* the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AC031419 938 bp DNA HTG 02-APR-2000 Giardia intestinalis clone EI1687 strain WB-CG, LOW-PASS SEQUENCE

* NOTE: This record contains 1 individual
* Sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* Will be sequenced to completion. In the event that
* the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Furbidopsis thaliana
Eukaryota: Viridiplantae: Streptophyta: Embryophyta: Tracheophyta;
Spermatophyta: Magnoliophyta; eudicotyledons; core eudicots:
Rosidae: eurosids II; Brassicales; Brassicaceae; Arabidopsis.

Genes were identified by a combination of several methods: Gene prediction programs including Genesan+ (Chris Burge, http://ccr.081.mit.edu/GENSCAN.html), GeneMarkHMM (Mark Borodovsky, http://genemark.biology.gatech.edu/GeneMark/), GlimmerA (a variant of GlimmerA, see Mihaela Pertea, Http://www.tigr.org/softlab/glimmerm.html, and GeneSplicer (Mihaela Pertea and Steven Salzberg, contact mpertea@tigr.org), searches of the complete sequence against a peptide database and the plant EST database at TiGR (http://www.tigr.org/tdb/tgl.shtml). Annotated genes are named to indicate the level of evidence for their annotation. Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with EST similarity are named as unknown proteins. Genes without protein profession proteins over most of their length are annotated as similarity are named as unknown proteins. Genes without protein professions. Genes encoding tRNAs are predicted by transcrible tRNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE). Simple repeats are identified by repeatmasker (Arian Smit, http://ttp.genome.washington.edu/RW/Repeatmasker.html).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /codon_start=1

Patent No. 6197517

GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: ESSENTIAL GENES OF YEAST AS TARGETS FOR ANTIFUNGAL
TITLE OF INVENTION: AGENTS, HERBICIDES, INSECTICIDES AND ANTI-PROLIFERATION
TITLE OF INVENTION: DRUGS
FILE REFERENCE: 9301-053
CURRENT APPLICATION NUMBER: US/09/315,794
CURRENT FILING DATE: 1999-05-21
NUMBER OF SEQ ID NOS: 64
SOFTWARE: PatentIn Ver. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 APPLICANT: Roberts, Christopher J.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 31, Application US/08320559
Patent No. 5633135
GENERAL INFORMATION:
APPLICANT: Croce, Carlo
APPLICANT: Canaani, Eli
TITLE OF INVENTION: Detection and Treatment of Acute Leukemias
TITLE OF INVENTION: Resulting from Chromosome Abnormalities in the
TITLE OF INVENTION: All-1 Region
NUMBER OF SEQUENCES: 44
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ADDRESSEE: Woodcock Washburn Kurtz Mackiewicz & No. 5633135ris

-!- FUNCTION: ADENOSYLHOWCCYSTEINE IS A COMPETITIVE INHIBITOR OF S-ADENOSYLL-WETHININE-DEPENDER METHYL TRANSFRAME REACTIONS; THEREFORE ADENOSYLHOWCCYSTEINASE MAY PLAY A KEY ROLE IN THE CONTROL OF METHYLATIONS VIA REGULATION OF THE INTRACELLULAR CONCENTRATION OF ADENOSYLHOMOCYSTEINE (BY SIMILARITY).
-!- CATALYTIC ACTIVITY: S-ADENOSYL-L-HOMOCYSTEINE + H(2)O -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         -i-- PATHWAY: ACTIVATED METHYL CYCLE.
-i-- SUBUNIT: HOMOTETRAMER (BY SIMILARITY).
-i-- SIMILARITY: BELONGS TO THE ADENOSYLHOMOCYSTEINASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      NAD (POTENTIAL).

Michalowski C.B., Bohnert H.J.;

Submitted (NOV-1996) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: ADENOSYLHOMOCYSTEINE IS A COMPETITIVE INHIBITOR OF
S-ADENOSYL-L-METHININE-DEPENDENT METHYL TRANSFERASE REACTIONS;
THEREFORE ADENOSYLHOMOCYSTEINASE MAY PLAY A KEY ROLE IN THE
CONTROL OF METHILATIONS VIA REGULATION OF THE INTRACELLUBAR
CONCENTRALTION OF ADENOSYLHOMOCYSTEINE (BY SIMILARITY).

-!- CATALYTIC ACTIVITY: S-ADENOSYL-L-HOMOCYSTEINE + H(2)0 =
ADENOSINE + L-HOMOCYSTEINE.
                                                                                                                                                                                                                                                                                                                                                              Mesembryanthemum crystallinum (Common ice plant).

MacDNA encoding the 57 kDa subunit of a cytokinin-binding protein
complex from tobacco: the subunit has high homology to S-adenosyl-L-
complex from tobacco: the subunit has high homology to S-adenosyl-L-
complex from tobacco: the subunit has high homology to S-adenosyl-L-
complex from tobacco: the subunit of a cytokinin-binding protein
a.4.1089-1096(1993).
                                                                                                                                                                                                                                                   Plant Cell Physiol. 34:1089-1096(1993).

-!- FUNCTION: ADENOSYLHOMOCYSTEINE IS A COMPETITIVE INHIBITOR OF S-ADENOSYL-L-METHIONINE-DEFENDENT METHYL TRANSFERASE REACTIONS; THEREFORE ADENOSYL-L-MOCYSTEINE MAY PLAY A KEY ROLE IN THE CONTROL OF METHYLATIONS VIA REGULATION OF THE INTRACELLULAR CONCENTRATION OF ADENOSYLHOMOCYSTEINE (BY SIMILARITY).

-!- CATALYTIC ACTIVITY: S-ADENOSYL-L-HOMOCYSTEINE + H(2)O = ADENOSINE + L-HOMOCYSTEINE.

-!- COPACTOR: NAD (BY SIMILARITY).

-!- PATHWAY: ACTIVATED METHYL CYCLE.

-!- PATHWAY: ACTIVATED METHYL CYCLE.

                                                                                                                                                                                                                                                                                       Arch. Biochem. Biophys. 317:201-207(1995).

-!- FUNCTION: ADENOSYLHOMOCYSTEINE IS A COMPETITIVE INHIBITOR OF S-ADENOSYL-L-METHIONINE-DEPENDENT METHYL TRANSFERASE REACTIONS; THEREFORE ADENOSYLHOMOCYSTEINASE MAY PLAY A KEY ROLE IN THE CONTENTRATION OF METHYLATIONS VIA REGULATION OF THE INTRACELLULAR CONCENTRATION OF ADENOSYLHOMOCYSTEINE (BY SIMILARITY).

-!- CONCENTRATION OF ADENOSYLHOMOCYSTEINE (H 2)O = ADENOSINE A L-HOMOCYSTEINE + H(2)O = ADENOSINE + L-HOMOCYSTEINE - + (2)O = ADENOSINE A CTIVATED METHYL CYCLE.

-!- COPACTOR: NAD (BY SIMILARITY).

-!- PATHWAY: ACTIVATED METHYL CYCLE.

-!- PATHWAY: ACTIVATED METHYL CYCLE.

-!- INDUCTION: BY INFECTION WITH B.CINBERA.
